Experience

Software Developer at *ComplianceCow* [↗](#)

Jan 2024 – Present

- Built **MCP tools** across the product suite (forms, assessments, rules, workflows) using the **MCP Python SDK** and **Goose** orchestrator, **moving manual UI clickops to chatops** and **improving client productivity by 75%** (per client testimonial).
- Shipped a **no-code task orchestrator** in **Go** that eliminated repeated scripting for control and workflow automation, **cutting authoring effort by 50%**, and authored reusable **Python** utilities for HTTP calls, schema validation, **SQL** querying, and data transforms.
- Built the orchestrator's **no-code authoring UI** in **React** with a third-party component library, including config preview, input uploads, and credentialed test execution — **halving rule-building ETA** and shifting the team from hand-written configs to **UI-generated, testable** ones.
- Configured customized workflows and control automations for enterprise clients, **reducing audit-preparation time by 80%**.

Software Developer Intern at *ComplianceCow* [↗](#)

Aug 2023 – Dec 2023

- Migrated the entire product from **Go templates** to a **React + Turborepo** monorepo, improving maintainability, scalability, navigation performance, and overall developer and user experience.
- Built client-facing features including control dashboards, an assistant chatbot UI, and in-app documentation components.

React Native Developer at *Byzero Technologies* [↗](#)

Mar 2023 – Oct 2023

- Designed UI mocks and built the storefront frontend for an e-commerce platform in **React** with **React Query** caching and API integration for fast, low-latency page loads.
- Shipped an internal daily work-log mobile app in **React Native** using **Expo**, **Redux Toolkit**, **React Context**, and **React Query**, cutting standup overhead and improving team productivity by **50%**, with logs feeding into performance-review metrics.
- Delivered client-facing static **WordPress** sites on schedule with **custom PHP plugin** development, ensuring on-time release and client satisfaction.

Technical Skills

Languages: Go, Python, JavaScript (ES6+)

Databases: MongoDB, PostgreSQL, Redis

Frameworks & Libraries: React, Next.js, React Native, Node.js, Express, RabbitMQ, WordPress, ServiceNow, Firebase

Frontend & UI: HTML, CSS, Tailwind, Material UI, Bootstrap, shadcn, Figma

DevOps: Docker, Kubernetes (basic), GitHub Actions

Version Control: Git (GitHub, GitLab)

Projects

LLM Book Recommender

[🔗 GitHub](#) [🔗 Live](#)

- Built a **semantic book search** app over a 7,000-title catalog — users describe what they want in plain English and get **ranked recommendations** via dense vector similarity, not keyword matching.
- Embedded book descriptions with **all-MiniLM-L6-v2** and indexed them in **Chroma**; queries embed with the same model, run **top-k ANN search**, and join results back to catalog rows via **ISBN** using **LangChain**, **Gradio**, and **pandas**.
- Deployed the live demo on **Hugging Face Spaces** with a **pre-built vector index** so the Space skips re-embedding 5k books on every deploy, enabling fast CPU inference at query time.

Education

KSR College of Technology

B.E. Computer Science Engineering

2020 – 2024

CGPA: 8.5
