Summary

Backend engineer with 2+ years shipping production **Python** and **Go** services: **MCP** tool APIs, REST API layers, concurrent job execution with retries and timeouts, and **LLM** / agentic product integrations. Docker and Kubernetes in daily delivery. Seeking **Backend Engineer** roles on MCP tool APIs, API layers, and agentic backends. Open to Bengaluru.

Technical Skills

Languages: Python, Go, SQL, JavaScript (ES6+)

APIs & agents: MCP (Model Context Protocol) tool APIs, REST APIs, JSON Schema, token authentication, error contracts, NL-to-action via LLM clients

Systems: Concurrency, async job execution, retries/timeouts, failure handling, background jobs, RabbitMQ, caching (Redis)

Data: SQL querying, Redis, MongoDB, vector search (**Chroma**)

LLM: MCP Python SDK, LangChain, embeddings, agentic chatops (Goose)

Delivery: Docker, Kubernetes, GitHub Actions CI/CD, Git, Linux

Enterprise / compliance: SOC 2, ISO 27001, and related GRC control automation in a multi-tenant SaaS product

Experience

ComplianceCow

Staff Software Engineer 3

Jul 2024 - Present

- Built production **MCP** tools (MCP Python SDK) over product **REST APIs** — tool schemas, token auth pass-through, error contracts — so LLM clients run Forms, Assessments, Rules, and Workflows instead of a click path.
- Shipped a **Go** workflow engine with concurrent workers, retries, timeouts, and failure handling for control and workflow automation, replacing per-customer scripts and cutting authoring effort about 50%.
- Wrote reusable **Python** integration code: HTTP clients (pagination, rate limits), JSON Schema validation, **SQL** querying, and data transforms used by multi-step jobs.
- Debugged production run failures at the job boundary (timeouts, retries, bad payloads) and tightened validation so bad input fails before a run starts.
- Contributed to 20+ **Go** microservices that power the CCM product APIs, from authentication through control automation and monitoring.
- Implemented common control mappings in a GRC / CCM product used against enterprise frameworks including **SOC 2** and **ISO 27001**, so one control set could cover multiple client scopes.

Software Developer Intern

Jan 2024 - Jun 2024

- Built **React** control dashboards and a chatbot UI that consume backend APIs; migrated the product frontend from Go templates to a React + Turborepo monorepo.
- Wrote control-automation integrations against enterprise systems (Azure, AWS, GCP, Okta, GitHub, GitLab, AuditBoard, Salesforce, ServiceNow).

Byzero Technologies

React Native Developer

Mar 2023 - Oct 2023

- Integrated **REST APIs** into a React storefront (caching, retries on failed loads) and shipped an internal React Native work-log app.

Projects

LLM Book Recommender

GitHub | Live

- LangChain** + **Chroma** vector index over 7k titles: embed descriptions (**MiniLM**), run top-k ANN search, join hits back to catalog rows. Deployed on Hugging Face Spaces with a pre-built index so deploys skip re-embedding.

Education

B.E. Computer Science Engineering — KSR College of Technology, Tiruchengode

2020 - 2024

CGPA: 8.5 | Go Programming Language, Udemy, April 2024
